

MOBILEINBOX

The Gateway to Wireless Data Revenue

It's not a big leap to hypothesize what your customers want most one wireless device that makes their lives simpler, easier and more manageable. In reality, there is no such gizmo but there is a solution: MobileInbox from Wabot. MobileInbox immediately gives people access to their personal and business email, calendar and contacts whether roaming around the world, their office or their own back yard-all from their Web-enabled phone or device. The solution is that simple.

What 's in it for you?

IMMEDIATE REVENUE

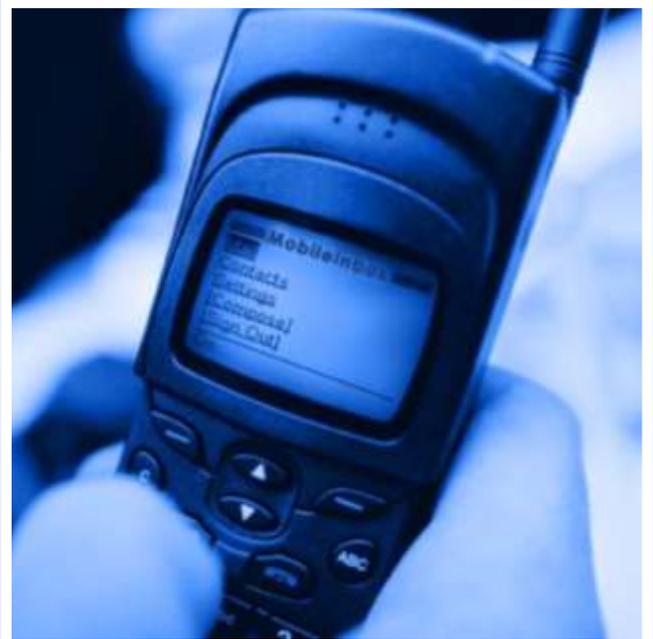

For a start, increased usage means increased revenues and immediate return on investment. How does increasing your subscribers' mobile Internet use by 25% or more sound? Then try this on expanding user's airtime up to 250 minutes per month. MobileInbox gives you the ability to leverage your greatest asset, your relationship with your customer.

INSTANT ACCESS

Did we mention instant mobility? In less than 10 minutes your subscribers can set up their account, read and reply to email and instantly access their calendar and contacts without the expense of an on-site corporate server. Whether you're targeting the single working parent, the busy executive or an entire corporate workforce, your subscribers will applaud how MobileInbox instantly frees them to easily access their business and personal information from one device.

COMPLETE CONTROL

Similar to Voice Mail and Caller ID, MobileInbox is a network-based, value-added service you can immediately offer your subscribers. Designed carrier-grade, MobileInbox integrates easily into your product arsenal, giving you complete control over how it's marketed. Its smooth integration with your billing and provisioning systems enables you to rapidly boost revenue from your best customers.

What 's in it for your subscribers?

All-in-One Business Tool

MobileInbox transforms the way people communicate. With wireless access to their most critical information email, calendar and contacts users can always be at the right place at the right time.

Instant Mobility

Within minutes, users are managing their email, Microsoft Outlook or Lotus Notes, calendar and contacts. There is no need for an on-site server.

Ultimate Simplicity

Users do not have to setup a new mailbox, remember multiple passwords or re-enter detailed contact information. They have easy access to up to 10 email accounts with just one login and can import contacts with just one click.

Real-Time Access

MobileInbox is uniquely designed to keep information continuously up-to-date. Email, calendar and contacts are automatically and effortlessly updated.

Hello

Mailboxes - Add all your Internet e-mail accounts.

Alerts - Receive alerts when important messages arrive.

Contact Import - Import contacts from Outlook® or Outlook Express®.

Quick Text - Set up instant reply messages, so you don't have to type!

Calendar - View your Outlook® or Notes® calendar with the ViAir Desktop Assistant.

Desktop Assistant - Get your corporate e-mail, calendar and contacts from your wireless device.

An intuitive and easy to use online interface makes setting up and managing MobileInbox a cinch.

Always Informed

Never miss an important email or appointment again. Users can receive alerts when important messages arrive and instantly reply with just one click.

Ease-of-Use

Voice Reply and Quick Text allow users to compose and reply to messages right away with minimal keystrokes, making mobile communication easier than ever.

End-to-End Security

User and corporate data are entirely secure. Data is encrypted and Secure Socket Layer is used to secure data from behind corporate firewalls.

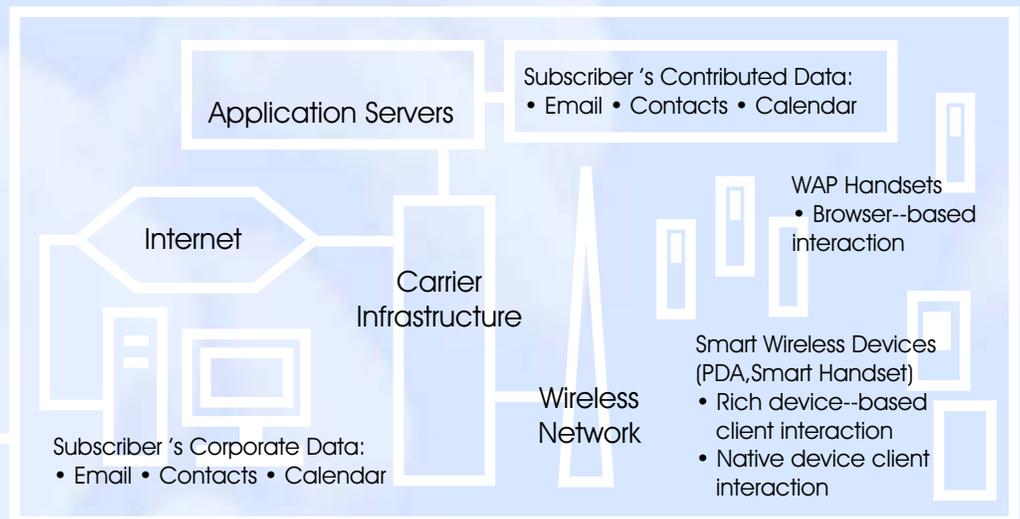

What We 've Heard

"Understanding the challenges of managing a Lotus Notes environment and having less than stellar success getting Palm and PocketPC devices to sync with email,calendar and address books, within our environment,I was extremely surprised at the almost effortless set-up and how seamlessly MobileInbox syncs with our Notes systems."***It 's become an invaluable tool.***"

Chief Operating Officer
TeleCommunications Company

How It Works

MobileInbox seamlessly integrates into your existing provisioning and user authentication systems.

Tech Specs

Supported Wireless Devices

- Web-enabled phones

Nokia 2.1	2.1	WML
Phone.com (OpenWave)	3.1.9, 3.1.14c, 4.1.17r, 4.1.21	HDML, WML

Supported Desktop Browsers

- Microsoft Internet Explorer 4.0 or greater
- Netscape 4.7 or greater

Supported Desktop Operating Systems

- Microsoft Windows 95/98/2000
- Microsoft NT4

Supported Notification Standards

- UP, Alerts
- SMS
- SMTP
- SMPP

Server Requirements

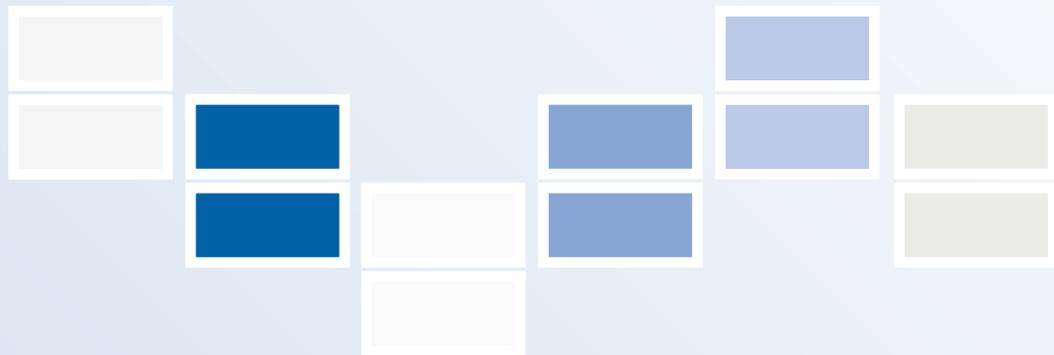

- Sun Solaris SPARC 8/Linux
- Oracle 8

Supported Languages

- Multi-lingual support allows Localization for global access

About Wabot Labs

Less than two years ago, a small cadre of mobile Internet visionaries recognized the growing need for applications and software infrastructure that would immediately drive adoption and repeat usage of the mobile Internet. In April 2000, they actualized their vision by founding Wabot.
